Your remote workers aren't using computers that look like this, are they???

When did you last check everything was But the other issue is that of security. OK with the devices your team is using when they work remotely (or even in the office)?

That might sound like a strange question. But we recently discovered that 67% of remote workers are using faulty devices to work from. And the reason?

They've likely damaged the device themselves and are too scared to tell you!

Laptops, keyboards, and monitors are most likely to be damaged (in that order). And it's usually because of food or drinks spills... though some people blame their partners, children, and yes, even their pets!

We've all watched in horror as a cat rubs itself against a full glass of water next to a laptop...

Using a device that doesn't work properly is Our advice? Make it a regular routine a problem no matter where it is.

First, it's going to damage your productivity. Tasks might take longer or never get completed. If they try to fix the problem themselves, they risk causing further damage.

And we all know a fork isn't a clever way to get bits of cake out of your keyboard ...

In some cases, your people will stop using their damaged company-issued device, and use a personal device instead.

Which puts your data at risk. Because their personal devices won't have the same level of protection as your business devices.

It also means that if they're connecting to your network, it might not be a safe connection, potentially leaving the door open for cyber criminals.

And because your IT partner isn't monitoring personal devices, it's possible they won't spot an intrusion until it's too late.

to check that everyone's happy with their devices. And have a policy that they won't get in trouble for accidental damage, so long as it's reported immediately.

If you need help replacing any damaged devices, just give us a call.

Your monthle newsletter, written

DID YOU KNOW? You might have a RAT?

Malware gets some funny names and acronyms. For example, you might have heard of the RAT which stands for Remote Access Trojan.

It's good when your IT partner remote access your computer. You can watch what they're doing. But with a RAT, cybercriminals have secret remote access, and vou have no idea.

They can watch what you're doing, copy your passwords and launch a ransomware attack.

The simplest way to avoid a RAT is to never download files from sources you don't trust or open email attachments from strangers. In addition, ensure your business has appropriate cyber security software and is regularly training for your team.

Techn@logy update

Windows 11's first major update is expected next month. We've heard talk of faster, smoother, a more modern-looking Windows interface, app folders in the start menu, as well as a new Task Manager app..

It's also been suggested that Windows 11 will work better on tablets after the update, too.

Have you made the switch from Windows 10 yet? If you have, What do you think about it? Will the improvements help?

JUNE 2022

INSPIRATIONAL QUOTE OF THE MONTH

"Just because something doesn't do what you planned it to do doesn't mean it's useless."

Thomas Edison, Inventor

You know when you think your phone has vibrated in your pocket, but when you pull it out... nothing? This has a name: "Phantom Vibration Syndrome"

NEW TO WINDOWS 11

Add folders to your start menu

If you've made the switch to Windows 11, you'll soon have a new power: The ability to organize your Start menu apps into folders.

It'll work by simply dragging and dropping icons on top of each other to create folders. You'll get this new power in an update in the next few months.

TECH FACTS

Malware is becoming increasingly difficult to spot

According to new research, four in five malware attacks delivered by encrypted connections evade detection. And since two-thirds of malware is now arriving this way, it has the potential to be a big problem for your business.

This type of threat has already hit record levels and continues to grow.

So, if you don't yet have a response and recovery plan in place, now's the time to create one.

It sits alongside your cyber security software protection and regular staff training. In addition, the plan details what you do in the event of a cyber-attack.

Having the right plan in place means all your people will know how to sound the alarm if something is wrong. In addition, it ensures downtime and damage is kept to an absolute minimum.

The faster you respond to an attack, the less data you should lose and the less it should cost you to put things right.

Of course, you should also follow the usual security guidelines by making sure that updates and patches are installed immediately, you have strong passwords, and regularly check that your backup is working and verified.

Businesses that don't place high importance on their own cyber security planning are the ones hit hardest by such an attack.

Can we help you create your response and recovery plan? Call us..

Business gadget of the month

Laptops are great for remote work. But sometimes you can't beat a desktop. That's where a good docking station comes in handy.

The StarTech Thunderbolt 3 Dual-4K Docking Station allows you to connect your laptop to two external monitors, printer, keyboard, and backup drives, giving you the full desktop experience.

It's expensive at \$315.99, but a good investment for remote workers or people on the go.

JUNE 2022

QUESTION

How can I make my display more organized?

ANSWER

Consider adding a second monitor. Not only will this allow you to better organize your apps and windows, but it will also give you more workspace. And many experts suggest a 20% improvement in productivity as a benifit

QUESTION Can my phone be hacked?

ANSWER

Yes! As well as the risk of phishing and smishing (that's phishing via text message), you also put your data at risk by connecting to public Wi-Fi. Fake apps can be an issue.

QUESTION

How do I know if my Teams app is up to date?

ANSWER

Just click on the three dots next to your profile picture and select 'Check for Updates' from the menu. If you're using Windows 11, you'll need to check under settings -> about Teams.
